

Winery Gift Pack

Windowed Carton Inserts

Thermoformed inserts for windowed cartons provide an attractive method of displaying your product. Many customers have combined promotional items with their product to increase sales. As in this application, a favorite of the liquor producers is to package an accessory with the bottle and hold them secure inside the carton with a unique design thermoformed insert.

Tray inserts can be made in clear or colored materials, with snap or hinged features that ensure fast and easy co-packing as well as a secure product during shipping and handling. Inquire about some of the latest techniques like printing directly on the plastic or maybe you'd like your package to have a metal look. We can also offer textures or patterns in materials using flocking or printing. We're accustomed to working with small volume sellers all the way up to the largest retailers. Shepherd welcomes the opportunity and challenge to find innovative ways to increase sales to customers.
